**The student shall register and complete the project based online course preferably in semester- I but may complete the same till the end of semester-II.**

**PECE 4201: Programme Elective-I**
1. Parallel Computing
2. Compiler Construction
3. Java Full Stack Technologies
4. Deep learning

**OE 4201: Open Elective II**
1. Introduction to Natural Language Processing
2. e-Business
3. Big Data and Analytics

CE 4201 NETWORK AND INFORMATION SECURITY

Teaching Scheme
Lecture: 3 Hrs./week

Examination Scheme
In semester: 50 Marks
End semester: 50 Marks
Credits: 3

Prerequisite(s): Computer Networks (CE 3101)

Forward Course Linkage(s): -

Course Objectives:

To facilitate the learners-
1. To understand the fundamental concepts of security.
2. To know the basics of cryptography
3. To understand role of protocols at various layers.
4. To apply the various security concepts.

Course Outcomes:

By taking this course, the learner will be able to–
1. Apply principles Cryptosystem.
2. Analyze data security over the network.
3. Determine advance security issues and choose appropriate technology.
4. Develop an understanding of modern networks from security perspective.

Unit 1: Introduction to Network Security (06)
Introduction to Network Security, Architectures, Introduction to common attacks, Overview of SQL injection, Cross Site Scripting, Buffer overflow security services, A model for Network and Inter network Security, OSI security Architecture (services and Mechanism), Introduction to cryptography- Classical Cryptography.

Unit 2: Introduction to Cryptography (07)
Introduction to secret key cryptography, Block cipher Basics, Introduction to DES, DES analysis, DES variants, Other example algorithms like AES and IDEA, Block cipher modes of operation

Unit 3: Public Key and Management (08)
Introduction to Public Key cryptography, The RSA algorithm, Analysis of RSA, Key management Basics, Diffie- Hellman Key exchange, Key distribution of Private and Public Keys.

Unit 4: Message Integrity and Authentication (08)

Unit 5: Firewalls and Security Protocols (07)
Introduction to Network Layer Security- Overview of Firewall, Design principles of
Firewalls, Various types of firewalls and their working principles. Concept of VPN, Tunneling protocols, Detail working of IPSEC. Introduction to transport Layer security – detail working of SSL protocol.

**Unit 6: Application Security** (06)
Overview of Application security, E-mail security (PGP), SET, Overview of Wireless security.

**Text Books:**

**Reference Books:**
CE 4202 Network and Information Security Laboratory

Teaching Scheme
Laboratory : 2 Hrs/week

Examination Scheme
Oral – 50 Marks
Marks – 50
Credit : 1

Course Objectives:

To Facilitate the Learners to:-

1. Understand Basic Cryptography Algorithms
2. Learn various techniques for secure data transmission
3. Recognize the need of Network Perimeter Security
4. Learn various techniques used for common attacks

Course Outcome:

By taking this course the learner will be able to :-

1. Implement Standard Cryptography Algorithms
2. Apply the digital signature for secure data transmission
3. Apply packet filtering concept
4. Demonstrate some common attacks

Sample /Suggested List of Assignments :

1. Implement DES algorithm
2. Implement RSA algorithms
3. Implement Message Digest Algorithm and demonstrate the collision resistance property
4. Implementation of Diffie Hellman Key exchange
5. Creation and Verification of Digital Signatures
6. Simulation of packet Filtering (ACL) concepts using CISCO packet Tracer
7. Create a small application to demonstrate SQL injection and Cross Site scripting attacks
8. Develop a website to demonstrate how the contents of the web site can be changed by attackers if it is http based and not secured
CE 4203 Project Phase-II

**Teaching Scheme**
- Tutorial: 2 Hrs /week
- Practical: 16Hrs/Week

**Examination Scheme**
- In Semester: 100 marks
- Oral: 50 marks
- Credits: 10

**Summary of the subject:**

This course is an extension to Project Phase-I to be completed in the semester I.

The course focuses on workload management, implementation, usage of tools, testing and delivering deliverables as per the plan presented and finalized in the semester I. Students have to apply project management concepts.

The projects are assessed using the continuous evaluation process by presentation, submission of a report, oral and technical presentation.

This course is to be conducted in the second semester.

**Course Objectives:**

To facilitate the learners to-

1) Provide a suitable and acceptable design solution to meet requirements.
2) Have systematic approach as a team following best practices and engineering processes.
3) Develop their personal skills.
4) Test rigourously the system developed.
5) Consolidate their work in a furnished report.

**Course Outcomes:**

By taking this course the learner will be able to -

1) Work in a team to develop the knowledge, skills, ethics and attitudes of a professional engineer.
2) Build a reasonably complex, useful and tested project which could be a product or service using appropriate tools, technologies.
4) Defend and justify effectively the work done, learning achieved, learning experience, and usefulness of product or service.

**Evaluation Criteria:**

The project work of the team will be assessed by the Project Guide. The guide will review the work done throughout the duration of the course. The Final semester oral examination will be conducted by examiners where the project group has to present their work using presentations.
Assessment should be done on the basis of the following points:

- The quality of oral, written presentations.
- Fitness of project to problem statement.
- Innovations, well thought contributions in giving a solution, meeting requirements, use of technology and algorithms.
- The process including the project software engineering, teamwork and documentation.
- Extent to which tools and technologies have been applied.
CE 4204 Project based online course

Teaching Scheme
Lecture : 2 Hrs /week

Examination Scheme
In Semester: 50 marks
Credits: 02

Summary:

This course will be undertaken by the students as a part of their preparation for conducting their final year Btech project. All group members belonging to the final year Btech project group should do the course. The project guide will play the crucial role in deciding the online course to be undertaken by the project group members. The student shall register and complete the project based online course preferably in semester- I but may complete the same till the end of semester-II.
PECE 4201 – Parallel Computing

Teaching Scheme
Lecture: 3 Hrs/week

Examination Scheme
In semester: 50 marks
End semester: 50 marks
Credits: 3

Course Objectives:

The major objectives of the course are to facilitate the learner to:
1. Understand the various aspects of the parallel processing.
2. Familiarize with the fundamental concepts, techniques and tools of parallel computing.
3. Identify advanced computer architectures, parallel algorithms, parallel languages, and performance-oriented computing.
4. Evaluate the performance measures of different parallel communication operations.
5. Identify mapping of applications to high-performance computing systems.

Course Outcomes:

By taking this course, students will be able to:
1. Distinguish between sequential and parallel architecture.
2. Apply different decomposition and communication techniques to approach parallel solution of the given application.
3. Apply parallel Programming constructs for Shared Address Space Platform.
4. Solve various examples of Advanced Parallel Algorithms.
5. Summarize the advanced techniques in Parallel Computing.

Unit 1-Introduction to parallelism (07)

Unit 2-Principles of Parallel Algorithm Design (08)
Concept of Decomposition, Tasks, Dependency Graphs, Granularity, Concurrency and Task Interaction, Decomposition Techniques, Characteristics of Tasks and Interactions, Mapping Techniques for Load Balancing, Interconnection Networks for Parallel Computers.

**Unit 3-Basic Communication Operations and Programming Using the Message Passing Paradigm**

Basic communication operations, Communication Costs in Parallel Machines, One-to-All Broadcast and All-to-One Reduction operations, All-to-All Broadcast and Reduction, , Scatter and Gather. Principles of Message Passing Programming, MPI routines.

**Unit 4-Programming Shared Address Space Platforms**

Thread Basics, The POSIX Thread API, The OpenMP Programming Model, Specifying Concurrent Tasks in OpenMP, Synchronization Constructs in OpenMP, OpenMP Library Functions, Evolution of Multicore solution, CUDA Hardware, Managing GPU memory, CUDA Kernel Function.

**Unit 5-Advanced Parallel Algorithms**

Dense matrix algorithms- Matrix Vector Multiplication, Matrix Matrix Multiplication, Sorting -Issues in Sorting on Parallel Computers, Bubble Sort and its Variants, Quicksort, Parallel Depth-First Search, Parallel Best-First Search

**Unit 6-Recent Trends in Parallel Processing**

**Text books:**

**Reference Books:**

Course Objectives:

To facilitate the learners -

1. To perform white box probing of compilers.
2. To discuss the effectiveness of optimization.
3. To learn and use tools for automatic compiler generation.

Course Outcomes:

By taking this course, the learner will be able to -

1. Apply an algorithm for lexical analysis and token generation for simple programming language;
2. Construct a parser for a small context-free grammar.
3. Create symbol table and intermediate code for a simple programming language.
4. Apply the code optimization and code generation algorithms to get the machine code for the optimized code.

Unit 1: Introduction to System Programming

Components of System Software, Language Processing Activities, Fundamentals of Language Processing, Structure of an assembler, Design of Two pass assembler, Single Pass Assembler, Linkers and Loader, Dynamic Link Libraries

Unit 2: Introduction to Compilation and Lexical Analysis

What is a Compiler, what is the Challenge, Compiler Architecture, Front end and Back end model of compiler, Cross compiler, Incremental compiler, Boot strapping. Concept of Lexical Analysis, Regular Expressions, Deterministic finite automata (DFA), Non-Deterministic finite automata (NFA), Converting regular expressions to DFA, Converting NFA to DFA, Hand coding of Lexical analyzer, Introduction to LEX Tool and LEX file specification

Unit 3: Syntax Analysis

Unit 4: Semantic Analysis (06)
Need of semantic analysis, Abstract Parse trees for Expressions, variables, statements, functions and class declarations, Syntax directed definitions, Syntax directed translation schemes for declaration processing, type analysis, scope analysis, Symbol Tables (ST), Organization of ST for block structure and non-block structured languages, Symbol Table management, Type Checkers: type checking for expressions, declarations (variable, type, function, recursive), statements

Unit 5: Intermediate Code Generation (06)
Intermediate languages, Design issues, Intermediate representations: three address, postfix & abstract syntax trees, Intermediate code generation for declaration, assignment, iterative statements, case statements, arrays, structures, conditional statements and Boolean expressions. Model of a program in execution, Stack and static allocation, Activation records

Unit 6: Code Generation and Code Optimization (08)

Text Books:

Reference Books:
1. Andrew Appel, “Modern Compiler Implementation in C”, Cambridge
PECE 4201 Java Full Stack Technologies

Teaching Scheme
Lectures: 3 Hrs/week

Examination Scheme
In Semester: 50 marks
End Semester: 50 marks
Credits : 3

Prerequisites: Data Structures and Algorithms II (CE 2201)

Course Objectives:
To facilitate the learner to -
1. Get exposure to full stack development in Java technologies.
2. Develop familiarity with the client side Java technologies.
3. Gain comprehensive knowledge about Java server side technologies for enterprise application development in practice.
4. Get familiar with the web services based approach for real-life application development.
5. Get acquainted with the database development technologies in Java.

Course Outcomes:
By taking this course, the learner will be able to -
1. Choose suitable client side Java technologies.
2. Analyze Java server side technologies for enterprise application development.
3. Identify the need and analyze the characteristics of web services paradigm.
4. Analyze the role of Java database development technologies to realize their suitability for application development.

Unit 1: Client Side Web Technologies (07)
n-tier architecture, HTML, JavaScript (JS), Document Object Model (DOM), Introduction to jQuery, Asynchronous JavaScript And XML (AJAX).

Unit 2: Server Side Java Web Technologies (07)
Introduction to server side technology, Java Servlets, Java Server Pages (JSP), JSP tags.

Unit 3: AngularJS (06)
Overview, Model View Controller (MVC) architecture, directives, controllers, modules, forms.

Unit 4: Java 2 Enterprise Edition (J2EE) Technologies (08)
Introduction to J2EE technologies, Enterprise Java Beans (EJB), Java Messaging Service (JMS), Remote Method Invocation (RMI).
Unit 5: Java Web Services (07)
Web Services: Overview, Java Web services based on SOAP and REST.
Case studies: Facebook API.

Unit 6: Java Database Programming and Hibernate (07)
Java Database Connectivity (JDBC), JPA (Java Persistence API).
Hibernate: Overview of Hibernate, architecture, Hibernate Object/Relational Mapping.

PECE 4201: Deep Learning

Teaching Scheme
Lectures: 3 Hrs / week

Examination Scheme
In Semester: 50 Marks
End Semester: 50 marks
Credits: 3

Prerequisites:
Artificial Intelligence and Machine Learning (CE3202)

Course Objectives:
To facilitate the learners to -
1. Understand building blocks of Deep Neural Networks.
2. Understand various optimization algorithms used for training Deep Neural Networks.
3. Understand the working of Convolutional Neural Network (CNN), Recurrent Neural Network (RNN), GRUs, Long Short Term Memory (LSTMs).
4. Have knowledge of Deep Architectures for solving various applications.

Course Outcome:
By the end of this course, students should be able to -
1. Apply the fundamental mathematical concepts to Deep Learning.
2. Interpret the basics Neural Networks for understanding of deep learning.
3. Apply the concepts of neural networks to design Convolution Neural Network and Recurrent Neural Network.
4. Apply available Deep Learning solutions to real time applications.

Unit 1: Machine Learning Recap (06)
Linear Algebra, Probabilities and Information theory, Basics of Machine Learning: Model Selection and Train/Validation/Test Sets, Bias Variance trade off, Overfitting, Regularization, Confusion matrix, Precision, Recall, F-score, ROC, K-fold cross validation

Unit 2: Introduction to Deep Learning (06)

Unit 3: Basics of Neural Networks (08)
Feed-forward neural network, Multi-Layer Dense Architecture, Activation Functions, Loss Function, Dropout, Stochastic Optimization: mini-batch gradient descent, Back Propagation, Gradients, hyper-parameters, over-fitting, regularization

Unit 4: Convolution Neural Network (CNN) (07)
Architecture: convolution Pooling Layers, Padding, Use of CNNs for classification, use for data compression, semantic segmentation, Image denoising, object detection

Unit 5: Recurrent Neural Network (RNN) (08)
Architecture, Gates, Use for time series data (anomaly detections), Use for text (sentiment) classification problem, generate new text, Introduction to GRUs, LSTMs
Unit 6 : Advanced Deep Learning

Deep Learning applications in Computer Vision / NLP / Text Mining / Big Data / IoT using ImageNet, AlexNet, VGG Net, ResNet etc.
Introduction to Generative Adversarial Networks, Deep Reinforcement Learning.

OE 4102 - Introduction to Natural Language Processing

Teaching Scheme
Lecture: 3 Hrs/week

Examination Scheme
In semester: 50 marks
End semester: 50 marks
Credits: 3

Course Objectives:
To facilitate the learner to:
1. Understand various aspects of Natural Language Processing.
2. Learn Phonological, Morphological, Syntactic and Semantic processing.
3. Understand issues related to ambiguity of Natural Language.
4. Understand the advanced applications of Natural Language Processing.

Course Outcomes:
By taking this course, the learner will be able to:
1. Explain importance of Natural Language Processing.
2. Identify the fundamental concepts and techniques of Natural Language Processing.
3. Analyze ambiguous structure of Natural Language.
4. Summarize the advanced applications of Natural Language Processing.

Unit 1-Introduction to Natural Language Understanding (06)
The Study of Language, Applications of Natural Language Understanding, Evaluating language Understanding Systems, Different levels of Language Analysis.

Unit 2-Fundamentals of Phonetics (07)
Speech Sounds and Phonetic Transcription, Articulatory Phonetics, The Vocal Organs, Place of Articulation of Consonants, Manner of Articulation of Consonants, Vowels, Syllables, Phonological Categories and Pronunciation Variation, Phonetic Features, Predicting Phonetic Variation, Factors Influencing Phonetic Variation.

Unit 3-Fundamentals of Morphology (08)
Unit 4-Fundamentals of Syntax

Word Senses, Relations Between Senses, WordNet, Word Sense Disambiguation, The Need for Discourse Structure, Segmentation and Cue Phrases, Discourse Structure and Reference, Relating Discourse Structure and Inference, Discourse Structure, Tense, and Aspect, Managing the Attentional Stack, Concept of Pragmatics

Unit 5-Fundamentals of semantics and Discourse

Word Senses, Relations Between Senses, WordNet, Word Sense Disambiguation, The Need for Discourse Structure, Segmentation and Cue Phrases, Discourse Structure and Reference, Relating Discourse Structure and Inference, Discourse Structure, Tense, and Aspect, Managing the Attentional Stack, Concept of Pragmatics

Unit 6-Applications of Natural Language Processing

OE 4201: e-Business  
(Open Elective-III)

**Teaching Scheme**
Lectures: 3 Hrs / week

**Examination Scheme**
In Semester: 50 Marks  
End Semester: 50 marks  
Credits: 3

**Prerequisites**: No Prerequisites

**Course Objectives**: 
To facilitate the learners to -
1. Understand the technological, economic and social phenomena behind rapid changes in the e-businesses  
2. Have a good working knowledge of e-business concepts, applications and technologies  
3. Understand the e-business models and infrastructure  
4. Learn how e-business concepts are applied to different fields, such as: education, banking, tourism and so on  
5. Inspire with online business ideas and motivate them to apply in the real life.  
6. Study the new trends in e-business, e-commerce

**Course Outcome**: 
By the end of this course, students should be able to -
1. Compare and select appropriate e-business model  
2. Apply different principles and practices of designing and developing e-business systems  
3. Design efficient and secured website for the online business  
4. Apply necessary back end system components required for successful e-business implementations  
5. Implement intelligence in building e-business by integrating BI and KM

**Unit I: Introduction**  
(07)
E-commerce and e-business, advantages of e-business in growth of a business, Transition from traditional business to e-business, features of e-business technology, e-business models, IT Infrastructure requirements of e-business  
**Case Study**: Various e-business models

**Unit II: Building e-business Websites**  
(7)
Issues involved in designing a website, designing in-house websites, steps involved in website development, e-business and website development solutions, Advantages of using an e-business solution, selection of a suitable e-business solution, security issues involved in websites, tracking and analysing website traffic data. Digital Marketing  
**Case Study**
Unit III : e-Business Infrastructure / Back end Systems  (7)
Back end system support requirements - security, scalability, availability, adaptability, manageability, maintainability, assurance, interoperability, load balancing; internet technology, World Wide Web, Internet software; Content management, Case Study

Unit IV : e-security & online payment systems  (7)
e-Business security policy, risks and risk assessment, practice guidelines to e-security, legal framework and enforcement, ethical, social and political issues in e-business
Performance characteristics of online payment systems, online payment methods, security and risk handling in online payments, fraud detection in online payments, IT Act 2000, digital signatures, digital certificates, and PKI; Case Study

Unit V : Knowledge management & BI for strategic e-business  (8)
From information processing to knowledge world, aligning knowledge with business, knowledge management platforms, state of knowledge and measuring parameters; knowledge industry, knowledge strategy, and knowledge workers
Business and Intelligence - applications and importance of business intelligence, implementation of intelligence, building BI systems, selecting BI tools, integrating BI and KM, decision-making and BI, Case Study

Unit VI : Launching an e-Business and e-business trends  (6)
Launching a successful e-business – requirement analysis, managing Web site development, search engine optimization, Evaluate Web sites on design criteria.
Future and next generation of enterprise e-business, challenges and new trends, ethical and regulatory issues

Teaching Scheme
Lectures : 3 Hrs / week

Examination Scheme
In Semester : 50 Marks
End semester : 50 marks
Credits : 3

Prerequisites : No Prerequisites

Course Objectives :
To facilitate the learners to -
1. Understand the concepts, challenges and techniques of Big data and Big data Analytics
2. Introduce the concepts of Hadoop, Map Reduce framework and R for Big data analytics
3. Teach students in applying skills and tools to manage and analyze the big data

Course Outcome :
By the end of this course, students should be able to -
1. Design and manage a big data application using Hadoop technology framework
2. Collect, manage, store, query, and analyze various form of big data using Map-Reduce and other Big Data tools
3. Apply Big Data Analytics tools for business decisions and strategy definition
4. Implement solutions to some of the open big data problems using R
5. Compare various Data Analytic Methods and trends

Course Contents

Unit I: Introduction (08)
Database Management Systems, Structured Data, SQL. Big data overview, characteristics of Big Data, Applications of Big data. Unstructured data, NOSQL, Advantages of NOSQL, Comparative study of SQL and NOSQL.

Unit II : Big Data Architectures, Hadoop (06)
Challenges Enabling real time big data processing, Hadoop - Introduction, Building blocks of hadoop, Installing and Configuring Hadoop

Unit III: Map Reduce (07)
components of Hadoop, HBASE, HIVE, Map Reduce Working, the Mapper and Reducer, InputFormats and OutputFormats, Introduction to HBASE, Sqoop, Spark

Unit IV: Big data Analytics (07)
Data Analytical Architecture, drivers of Big Data, Emerging Big Data Ecosystem and new approach. Data Analytic Life Cycle: Discovery, Data preparation, Model Planning, Model Building, Communicate Results, Operationalize. Case Study: GINA
Unit V: Analytics using R (08)
R Fundamental: Math, Variables, Strings, Vectors, Factors, Vector operations; Data structures in R: Arrays & Matrices, Lists, Data frames; R programming fundamentals: Conditions and loops, Functions in R, Objects and Classes; Working with data in R: Reading CSV and Excel Files, Reading text files, Writing and saving data objects to file in R

Unit VI: Data Analytic Methods and trends (06)
Statistical Methods, Machine learning methods – supervised, unsupervised; recommendation systems, Big data Visualization, Open source Tools / Techniques / Languages (R, Python etc.)
