# T. Y. B. Tech. -- Semester-II

Course Code	<b>Robotics and Control Systems</b>	]	Ĺ	Т	Р				
20ME601			3	0	0				
Prerequisite	Basic Mathematics, Engineering Mechanics, Elements Electrical and Electronics Engineering	of	Credit : 03						
Course Objectives:	•								
To familiarize the st 1. Basics of Ro 2. Robotic cont 3. Control Tecl 4. System Mod	<ul> <li>To familiarize the students</li> <li>1. Basics of Robotics</li> <li>2. Robotic control and Actuation</li> <li>3. Control Technology</li> <li>4. System Modelling, Stability and Control actions.</li> </ul>								
At the end of the contract of the end of	ourse, student will be able to n of the basic Robotic systems components and performa the fundamentals of Robotic sensory and actuation system robotic kinematics basic control systems and it's classifications system model and can perform the stability analysis of th different controller modes and perform the frequency do	ince paramet ns e model main analys	is						
Unit 1	Introduction to Robotics	5 hours	CC	):1					
Basic concepts, Laws of Robotics, Classification, Structure of Robots, Point to point and continuous path control system, Robot performance measurement characteristics- accuracy, resolution, repeatability, precision, dexterity, Industrial Applications.									
Unit 2Robotic Sensors & Actuation6 hoursCO :									
Classification, Selection and application, Need for sensors and vision system is robotic control. Sensors: Light,Soud,Temperature,Contact,Proximity,Distance,Pressure,Tilt,Navigation,Acceleration GPS, IMU, Vision, PVDF Tactile( Construction, working and selection) Actuation: Selection of Drives, Actuators and transmission system of manipulator. Machine Vision System: Vision system devices, image acquisition, Masking, Sampling and Quantization Image processing techniques. Noise reduction. Edge detection. Segmentation									

Uni	t 3	Robot Kinematics	6 hours	CO:3					
Transformation matrices ,link and joint, Denavit- Hartenberg (D-H) parameters, kinematics redundancy, kinematics calibration, inverse kinematics Static force and velocity in manipulators, Motion of the manipulator links, Jacobians, Singularities, static forces. Jacobian in force domain.									
Uni	t 4 Control System 6 hours CO : 4								
Def For Mas	Definition, Classification- open loop and closed loop control system, case studies, Feedback and Feed Forward Control System, Transfer Function, Block diagram reduction techniques, Signal flow Graphs- Mason's Gain Formula								
Uni	t 5	System Modelling and Stability	7 hours	CO:5					
Basic system Models: Thermal, Fluid, Hydraulic, Mechanical: Spring-Mass-Damper system equations Stability Analysis in S-Domain: The concept of stability, Poles and Zeros of system – Routh-Hurwitz"s stability criterion – qualitative stability and conditional stability – Limitations of Routh-Hurwitz"s stability. Root Locus Technique: Concept of root locus – Construction of root locus.									
Uni	t 6	Controllers and Frequency Response Analysis	6 hours	CO:6					
Cor Fre mar	<b>itrollers:</b> On-O <b>quency domai</b> gin, Stability a	Off,P,I,D,PI,PD and PID Controller working principle. <b>n specifications</b> , Bode plot diagrams-Determination of Ph nalysis from Bode plots, Polar plots. <b>Total Lecture hours:</b>	ase margin a	and Gain					
		Tour Lecture nours.	co nours						
<b>Tex</b> 1.	<b>t Books:</b> S.K.Saha, "Ir	troduction to Robotics", 2 <sup>nd</sup> edition, TataMcGraw Hill Pub	olication,						
2.	John J. Craig, "Introduction to Robotics: Mechanics & Control", 3rd edition, Pearson Education.								
3.	Ogata K., "Modern Control Engineering" Prentice Hall of India								
4.	Nagrath I.J., & Gopal M, "Control system Engineering." Wiley Eastern Reprint								
5. C D Johnson, "Process Control Instrumentation Technology", Prentice Hall of India, New Delhi									
Ref	erence Books:								
1.	Handbook of	design, manufacturing and Automation: R.C. Dorf, John V	Viley and So	ns					
2.	W. Bolton: Mechatronics: Electronic Control Systems in Mechanical and Electrical Engineering, Third Edition, Pearson Education (Low Price Edition)								

Department of Mechanical Engineering

Course Name	Applied Thermodynamics							
	Applied Thermodynamics		L	Т	Р			
Course Code	20ME602		2	1				
Pre-requisite	Engineering Thermodynamics, Fluid Mechanics, He Transfer	eat	Syllabus Versior					
					V:1.1			
Course Objective	s:							
To make students								
<ol> <li>understand</li> <li>understand</li> <li>understand</li> <li>understand</li> <li>understand</li> </ol>	performance parameters of reciprocating air compressor. and analyze refrigeration cycles various psychrometric processes performance parameters of gas turbines.							
Course Outcomes								
Students will be a	ble to							
After successful co	ompletion of the course, student will be able to							
<ol> <li>Evaluate is</li> <li>Analyze res</li> <li>Plot psychr</li> <li>Calculate tl</li> </ol>	othermal and volumetric efficiency of reciprocating comp frigeration cycles and calculate COP. cometric processes and perform air conditioning load calc he efficiency and power developed for a gas turbine	pressor. ulations.						
Unit/Module: 1	Reciprocating Air Compressors	6 hours	C	0:1				
Computation of we Capacity control of	ork done, Isothermal efficiency, Volumetric efficiency, M f compressor	Iulti stagin	ng of co	ompres	sor,			
Unit/Module: 2	Refrigeration	6 hours	c C	0:2				
Vapor compression	n cycle, Multistage refrigeration, Vapor absorption cycle	_	•					
Unit/Module: 3	Psychrometry	6 hours	C C	0:3				
Basic concepts and definitions, Psychrometric chart, Analysis of various psychrometric processes								
Unit/Module: 4	Gas Turbines	6 hours	C	0:4				
Working of Bravto	n Cycle, Thermal Efficiency, Work ratio, maximum & op	ptimum pr	essure	ratio,				
8								
Actual cycle, Effec	et of operating variables on thermal efficiency, Inter-cool	ing, Rehea	iting, a	nd				

Department of Mechanical Engineering

Tex	xt Books:
1.	S. Domkundwar, C.P. Kothandaraman, A. Domkundwar, Thermal Engineering, Dhanpat Rai & Co
2.	Arora C.P. Refrigeration and Air Conditioning, Tata McGraw-Hill
3.	Manohar Prasad, Refrigeration and Air Conditioning, Wiley Eastern Ltd
4.	V. Ganeshan, Gas Turbines, Tata Mcgraw Hill

Course N	Name	System Dynamics – Modeling and Simulation	tem Dynamics – Modeling and Simulation						
Course C	Code	20ME603	2	1	0				
Pre-requ	Pre-requisiteAnalysis and Synthesis of Mechanisms, Machine Design, Power Train Design								
Course C	Objectives	•	1						
<ol> <li>To un vibrat</li> <li>To an</li> <li>To ca</li> <li>To de</li> <li>To ex</li> </ol>	<ol> <li>To understand the methods to find natural frequency of system subjected to undamped free vibrations</li> <li>To analyze the system subjected to vibrations with viscous/coulomb damping</li> <li>To calculate the amplitude and phase difference for various cases of forced vibrations</li> <li>To determine natural frequencies and mode shapes of multiple degree of freedom system</li> <li>To explain the features and applications of various dynamic modeling techniques</li> </ol>								
Course (	Outcomes:								
Upon cor	npletion of	f this course, the student will be able to,							
<ol> <li>evalua</li> <li>analy</li> <li>calcul</li> <li>detern</li> <li>under</li> </ol>	ate the nat ze the syst late the am mine natur rstand featu	ural frequency of system subjected to undamped free vibrations em subjected to vibrations with viscous/coulomb damping plitude and phase difference for various cases of forced vibration al frequencies and mode shapes of multiple degree of freedom sy ures and applications of various dynamic modeling techniques	ns vstem						
Unit 1	Fundam	entals of Dynamic System	4 hour	s	CO: 1				
Elements and non-l	of a vibra	tory system, S.H.M., degrees of freedom, modeling of a system, ems, equivalent spring, linear and torsional systems. Matrix Alge	concept bra	of lin	iear				
Unit 2	Single D	egree of Freedom Systems – Free and Forced Vibrations	6 hour	s	CO: 2				
Natural frequency by equilibrium and energy methods for longitudinal and torsional vibrations. Forced vibrations of longitudinal and torsional systems, simple harmonic excitation, excitation due to reciprocating and rotating unbalance, base excitation, magnification factor and phase difference, force and motion transmissibility Different types of damping, free vibrations with viscous damping - over damped, critically damped and under damped systems, dry friction damping.									
Unit 3	nit 3 Multiple Degree of Freedom Systems - Undamped Vibrations 6 hours CO: 3								
Free vibra shapes. E	Free vibration of spring coupled systems – longitudinal and torsional, natural frequency and mode shapes. Eigen value and Eigen vector by Matrix method, Geared systems.								

Unit 4	Frequency Response and Vibration	6 hours	CO: 4							
Digital an	Digital and Fast Fourier Transform, Frequency Response of first and second order Systems, Vibration									
Isolator a	Isolator and Vibration Absorption, Response to General Periodic Inputs									
Unit 5	Dynamic Modeling and Simulation	6 hours	CO: 5							
Introduct	ion to Laplace Method for Step input, impulse input to SDOF, Laplace Tran	nsform, Resp	ponse							
for First (	Order Models, State Space system, Simulations using MATLAB and SIMU	LINK, Base	;							
Excitation, Rotating Imbalance										
	Total Lecture hours:	28 hours								

Te	xt Books:
1.	William J. Palm III, Modeling, Analysis, and Control of Dynamic Systems, Wiley, latest edition
2.	Rao S. S., "Mechanical Vibrations", Pearson Education Inc. Dorling Kindersley (India) Pvt. Ltd.
Ref	ference Books:
1.	William J. Palm III, System Dynamics, Mc-Graw Hill, latest edition
2.	Grover G. K., "Mechanical Vibrations", Nem Chand and Bros.
3.	Thomson, W. T., "Theory of Vibration with Applications", CBS Publishers and Distributors.
4.	V P Singh, "Mechanical Vibrations", Dhanpat Rai & Sons.
5.	Kelly S. G., "Mechanical Vibrations", Schaum,,s outlines, Tata McGraw Hill Publishing Co. Ltd.
6.	Meirovitch, "Elements of Mechanical Vibrations", McGraw Hill.
7.	M.L.Munjal, "Noise and vibration control", Cambridge University Press India Private Limited.
8.	Bies, D. and Hansen, C., "Engineering Noise Control - Theory and Practice", Taylor and Francis.

Course Name	Turbo Machines	]	L T I						
Course Code	20ME604		3 1 -						
Pre-requisite	Physics, Calculus, Fluid Mechanics	Sy	llab	ous Ve	rsion				
					V:1.1				
Course Objective	s:	I							
Course prepares	students to								
<ol> <li>differentiate between impulse and reaction turbine</li> <li>illustrate inlet and outlet conditions of a turbomachine with the help of velocity triangles</li> <li>calculate the head requirement and efficiency of a centrifugal pump</li> <li>determine the slip and efficiency of a centrifugal compressor</li> </ol>									
Course Outcomes	:								
<ol> <li>Compute th</li> <li>Compute th</li> <li>Determine</li> <li>Calculate th</li> <li>Perform ca</li> <li>Construct v</li> </ol>	The power developed and efficiency of hydraulic turbine head developed by a centrifugal pump and power required the diagram efficiency and diagram power for a given steam lculations for the power developed and efficiency for gas to velocity triangles and calculate thermal efficiency of centrif	to operate i 1 turbine urbine fugal compt	it resso	or					
Unit/Module: 1	Introduction	4 hours	CC	<b>):</b> 1					
Turbo m positive displacem triangle and impac	achines (Hydraulic & Thermal), Classification of Turbo r ent machines, Fundamental equation governing turbo mach t of jet on curved vanes	nachines, C hines, Conc	Comp cepts	oarisor of Ve	n with clocity				
Unit/Module: 2	Hydraulic Turbines	8 hours	CC	<b>D: 2</b>					
Pelton wheel- Construction, principle of working, velocity diagrams and analysis, design aspects, Reaction Water Turbines : Classifications, Francis, Propeller, Kaplan Turbines, construction features, velocity diagrams and analysis, degree of reaction,									
Unit/Module: 3	Unit/Module: 3Steam Turbine8 hoursCO: 3								
Steam Turbines: Classifications (Axial and Radial), construction details, compounding of steam turbines, velocity diagrams and analysis of Impulse and reaction turbines (single stage), governing of steam turbines									

Unit/Module: 4	Centrifugal Pump	8 hours	CO:4
Classificati	on of rotodynamic pumps, components of centrifugal pu	mp, types of	heads, velocity
triangles a	nd their analysis, effect of outlet blade angle, cavitati	on, NPSH,	specific speed,

	performance characteristics of centrifugal pump, Cavitation, open, semi open impeller pumps								
Unit/Module: 5     Centrifugal Compressor     8 hours     Centrifugal Compressor							CO: 5		
	Classification of rotodynamic compressors, blowers, fans. Centrifugal compressor: Construction, flow process on T-S Diagram, velocity diagram and Euler's work, slip factor and its effect on work input, actual work input, dimension parameters, surging, choking, stalling.								
			Tota	l Lecture h	ours:	36 hours			
Tex	t Books:								
1	Jagdish Lal,	ydraulic Machines, Metropolit	tan Book	Company					
2	2 Kadambi & Prasad, An Introduction To Energy Conversion: Turbomachinery - Vol. III, New Age International								
3	William W. I	eng, Fundamentals of Turboma	achinery,	John Wile	y & So	ns.			
4	Turbines, Compressors & Fans, S.M. Yahya, Tata-McGraw Hill								
5	S.L. Dixon, Fluid Mechanics, Thermodynamics of Turbomachinery, IV edition, Butterworth-Heinemann Publ., 1966.								
6	R. K. Rajput	Hydraulic Machines, S. Chand							
7	V. Ganeshan, Gas Turbines, Tata Mcgraw Hill								

Course Name	<b>Industrial Engineering and Operations Rese</b> [ <b>IEOR -</b> OEHS]	arch	L	Т	Р			
Course Code	20OEHS601		3	-	-			
Pre-requisite	Manufacturing Process, Industrial Inspection, Quality C	ontrol	Syllabus Versio		rsion			
			V:1.					
Course Objectives	•							
Course prepares s	tudents to							
<ol> <li>Understand of Study and W</li> <li>Develop math applications.</li> <li>Understand p</li> </ol>	<ol> <li>Effectively explain production planning and Control functions.</li> <li>Understand different types of analysis using industrial engineering techniques viz. Method Study and Work Measurements</li> <li>Develop mathematical skills to analyse Project Scheduling arising from a wide range of applications.</li> <li>Understand procedure for Replacement and Queuing System analysis</li> </ol>							
Course Outcomes:								
Students will be al	ble to							
<ol> <li>Analyze difference</li> <li>Analyze difference</li> <li>Apply methor</li> <li>Analyze the gradient</li> <li>Analyze the gradient</li> </ol>	erent types of production planning functions viz. productive production planning, forecasting, inventory control, d study and work measurements technique to solve indust given Project for optimum schedule and sequence. given industrial situation to optimize replacement decision	vity analy rial prob 1 and que	vsis, Ag lem, euing p	ggrega roblem	te			
Unit/Module: 1	Industrial Engineering, Productivity and PPC	6 hours	s CO: 1					
<ul> <li>Industrial Engineering: Objectives, Functions &amp; Tools; Production Systems and Organisation structures: Types, Strategies &amp; Principles</li> <li>Productivity Analysis: Definition, Factors Affecting the Productivity, Productivity models and index (numerical);</li> <li>Production Planning and Control: Functions of PPC, Aggregate production planning; Capacity Planning, ERP</li> </ul>								
Unit/Module: 2	Production Forecasting and Facility Planning	6 hours	C	<b>D: 1</b>				
<ul> <li>Forecasting Techniques: Qualitative and Quantitative Methods: Causal and time series models, moving average, exponential smoothing, trend and seasonality (Numerical)</li> <li>Facility Layout Planning: Factors Influencing, Material Flow Patterns, Tools &amp; Techniques</li> </ul>								

Inventory Control: Inventory costs, Types of inventory models - Deterministic and

Course N	ame		<b>Robotics and Controls Lab</b>	L	Т	Р
Course C	ode	20ME601L		-	-	2
Pre-requisite Engineerin		Engineering	Mechanics, Elements of Electrical and Electronics Engineering	Syllabus Versio		ersion
Course O	bjectives	:				
To familia 1. Ba 2. Cc 3. Inc Course O	arize the st usics of rol ontrol syst dustrial ap	tudents with the pots and robotic em and controll plication of rob	manipulator components er actions otics and Controllers			
After succ 1. Ide 2. Pe 3. Int 4. Ide	cessful cor entify the rform forv tegrate dif entify and	npletion of the operation of the operati	course, student will be able to otics and apply the knowledge to design simple c e kinematic analysis of robotic system. sensors and control the basic robotic motion. vledge of basic concepts of robotic system and its	control sy s compo	/stem. nents.	
1	Study co , Etc) and	mponents of an d its DH parame	industrial robot (PUMA, KUKA, FANUC, MTA	AB, UR		
2	Forward other free	kinematics and e software tool)	validation using suitable software (Robo Analys	er/ MatL	ab or	any
3	Inverse k	tinematics of an	industrial robot and validation using any open so	ource sof	ftware	
4	Integration controlle	on of assorted so rs in a robotic s	ensors (IR, Potentiometer, strain gages etc.), micr ystem. (Free software, Matlab)	0		
5	Control	experiment usin	g available hardware or software. (Open source of	or Matlat	<b>)</b> ).	
6	Tunning	of PID Control	ler for suitable application.			

MKSSS's Cummins College of Engineering for Women, Pune (An Autonomous Institute Affiliated to Savitribai Phule Pune University)

7	Small group project work relevant to Industrial automation.			
8	Industrial visit to any Robotic assembly line or Robot assisted	d manufactu	ring.	
	Total Lab hours:	hours	20	

Text	books:
1.	Introduction to Robotics : J. Craig, Pearson
2.	Robot Dynamics and Control, Spong & Vidyasagar, Mc Graw Hill
3.	Robotics : Subir K Saha , Mc GrawHill
4.	Industrial Robotics : M. P. Groover, Ashish Dutta, McGraw Hill
5.	S.R.Deb, "Robotic Technology and Flexible Automation".TataMcGraw Hill Publication.

Course Name	System Dynamics – Modeling and Simulation Lab	L	Т	Р
Course Code	20ME603L	-	-	2
Prerequisite	<ul><li>1.Analysis and Synthesis of Mechanisms</li><li>2.Machine Design</li><li>3.Power Train Design</li></ul>	Syllab	ous Ve	rsion
Co -requisites:	System Dynamics - Modeling and Simulation			V:1.1

## **Course Objectives:**

1. To understand the methods to find natural frequency of system subjected to undamped free vibrations

- 2.To determine natural frequencies and mode shapes of multiple degree of freedom system
- 3. To understand the implications of rotating imbalance
- 4. To explain the features and applications of various dynamic modeling techniques

## **Course Outcomes:**

Upon completion of this course, the student will be able to,

- 1.evaluate the natural frequency of system subjected to un-damped free vibrations
- 2.determine natural frequencies and mode shapes of multiple degree of freedom system
- 3. perform experiment of rotating imbalance
- 4. understand features and applications of various dynamic modeling techniques

## **Text Books/References:**

William J. Palm III, Modeling, Analysis, and Control of Dynamic Systems, Wiley, latest edition

## List of Experiments:

1	MATLAB and some Functions
2	Data Acquisition Basics + SDOF Undamped
3	Cantilever Beam (SDOF System)
4	SDOF Simulation – MATLAB SIMULINK –Underdamped Free Vibrations
5	SIMULINK Examples and Numerical Methods
6	Air Track SDOF and 2DOF Free Vibration
7	Eigenvalue in MATLAB/Simulation of 2 DOF system
8	Rotating Imbalance

			Fo	Women		
Course Name	Turbo Machines Lab	L	Т	Р		
Course Code	20ME604L	-	-	2		
Pre-requisite	Fluid dynamics	Syllabus Ver		rsion		
Course Objective	s:					
To make students	3					
<ol> <li>To conduct</li> <li>To calculat</li> <li>To Illustrat</li> <li>To Comparison</li> </ol>	t experiments involving various parameters of different turbo mach the hydraulic and overall efficiency of a given hydraulic turbine the characteristics in the graphical form the results with available characteristic curves and deduce the co	nines onclusio	n from	ı it		
Course Outcomes	S:					
Students will be a	ble to					
After successful co	ompletion of the course, student will be able to					
<ol> <li>conduct ex</li> <li>calculate h</li> <li>Illustrate th</li> <li>Compare th</li> </ol>	periments involving various parameters of different turbo machine ydraulic and overall efficiency of a given hydraulic turbine he characteristics in the graphical form he results with available characteristic curves and deduce the concl	s usion fr	rom it			
1 Verificatio	n of impulse moment principle using impact of jet on curved vane					
2. Study and operating c	constant speed trial on impulse water turbine (Pelton wheel) and pl	lotting c	of main	and		
3. Study and operating c	<ol> <li>Study and constant head trial on impulse water turbine (Pelton wheel) and plotting of main and operating characteristics</li> </ol>					
4. Study and operating c	Study and constant speed trial on any hydraulic reaction turbine and plotting of main and operating characteristics					
5. Study and operating c	constant head trial on any hydraulic reaction turbine and plotting o haracteristics	f main a	and			
6. Study and rotary com	trial on centrifugal pump and plotting operating characteristics Stupressors.	ıdy ar	nd tri	al of		
<ol> <li>Visit to hydrox</li> <li>8. Performance</li> </ol>	dro/steam power plant and report to be submitted. ce Test on Gear (Oil) Pump Test Rig					
	Total Lab hours: hours	s 20
